

In the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

1 1. (Previously Presented) A method of video messaging
2 comprising:
3 in a transmission station:
4 recording a combined audio/video message in digital form;
5 generating a digital data attachment file;
6 transmitting the recorded combined audio/video message
7 and the digital data attachment file to a predetermined
8 reception station;
9 in a reception station
10 storing a received combined audio/video message and
11 digital data attachment file in a nonvolatile memory; and
12 at a time other than reception of the combined
13 audio/video message, displaying the stored combined
14 audio/video message to a user;
15 at a time other than reception of the combined
16 audio/video message, presenting the digital data attachment
17 file in a manner perceivable by a user.

2 and 3. (Canceled)

1 4. (Previously Presented) The method of video messaging of
2 claim 1, wherein:
3 in the transmission station:
4 said digital data attachment file consists of a word
5 processing document;
6 in the reception station:

7 said step of presenting the digital data attachment file
8 includes running a word processing program compatible with the
9 word processing document.

1 5. (Previously Presented) The method of video messaging of
2 claim 1, wherein:

3 in the transmission station:

4 said digital data attachment file consists of a
5 spreadsheet document;

6 in the reception station:

7 said step of presenting the digital data attachment file
8 includes running a spread sheet program compatible with the
9 spreadsheet document.

1 6. (Previously Presented) The method of video messaging of
2 claim 1, wherein:

3 in the transmission station:

4 said digital data attachment file consists of an audio
5 file separate from the audio of the combined audio/video
6 message;

7 in the reception station:

8 said step of presenting the digital data attachment file
9 includes generating an aurally perceivable indication of the
10 audio file separate from the audio of the combined audio/video
11 message.

7 to 9. (Canceled)

1 10. (Previously Presented) A method of video messaging
2 comprising:

3 recording a combined audio/video message in digital form;
4 generating a digital data attachment file;

5 transmitting the recorded combined audio/video message and the
6 digital data attachment file to a predetermined reception station.

1 11. (Previously Presented) The method of video messaging of
2 claim 10, wherein:

3 said digital data attachment file consists of a word
4 processing document.

1 12. (Previously Presented) The method of video messaging of
2 claim 10, wherein:

3 said digital data attachment file consists of a spreadsheet
4 document.

1 13. (Previously Presented) The method of video messaging of
2 claim 10, wherein:

3 said digital data attachment file consists of an audio file
4 separate from the audio of the combined audio/video message.

1 14. (Previously Presented) A method of video messaging
2 comprising:

3 storing a received combined audio/video message and digital
4 data attachment file in a nonvolatile memory; and

5 at a time other than reception of the combined audio/video
6 message, displaying the stored combined audio/video message to a
7 user;

8 at a time other than reception of the combined audio/video
9 message, presenting the digital data attachment file in a manner
10 perceivable by a user.

1 15. (Previously Presented) The method of video messaging of
2 claim 14, wherein:

3 said step of presenting the digital data attachment file
4 includes running a word processing program compatible with the word
5 processing document.

1 16. (Previously Presented) The method of video messaging of
2 claim 14, wherein:

3 said step of presenting the digital data attachment file
4 includes running a spread sheet program compatible with the
5 spreadsheet document.

1 17. (Previously Presented) The method of video messaging of
2 claim 14, wherein:

3 said step of presenting the digital data attachment file
4 includes generating an aurally perceivable indication of the audio
5 file separate from the audio of the combined audio/video message.
